

NAGARJUN KALYANKARI

Senior Data Scientist / GenAI Engineer (6+ Years Experience)

About Me

Machine Learning Engineer with 6+ years' experience in Python, specializing in LLMs, NLP, model deployment, and data pipelines. Proven track record of delivering scalable, production-ready AI systems at speed.

nagarjunkalyankari9@gmail.com

Bengaluru, India

Language

- English
- Hindi

Expertise

- Python (Advanced), AI/ML
- GenAI, Agentic AI, Prompt Engineering
- RAG Models, Langchain, LlamaIndex, Langraph
- LLMs, OpenAI, GPT, Gemini, Claude, Llama, Bert, Huggingface Models,
- Vibe coding tools, Co-Pilot, Lovable
- Microservices, RESTful APIs,
- FastAPI, Flask
- SQL, MongoDB, Snowflake, Vector Databases, Graph Databases, PowerBI, Tableau

Experience

Senior Articicial Intelligence Engineer (GenAI & Python)
OptivalueTek – Bengaluru, India
10/2023 – 02/2025

- Developed and deployed LLM-powered APIs with FastAPI using OpenAI, LangChain, and LlamaIndex for retrieval-augmented generation (RAG).
- Implemented test-driven ML workflows with pytest and ensured high model reliability.
- Designed and optimized vector database schemas (FAISS, Pinecone) for efficient context retrieval.
- Authored detailed API and model integration documentation for scalable AI deployments.

Data Engineer (Python & AI/ML)
Edureka –Bengaluru
05/2021 – 09/2023

- Built modular Python APIs for consuming PowerBI analytics dashboards and enterprise data systems.
- Designed database schemas in snowflake to improve query efficiency and reduce storage overhead.

Python Developer
Ebisu Technologies | Bengaluru, In
05/2019 – 03/2021

- Built backend services & REST APIs using Python, Django, Flask. For Machine learning based ETL Pipeline suing Apache Airflow
- Managed databases (MySQL, PostgreSQL, MongoDB) with optimized schemas.

Education

VisvesvarayaTechnical University, Belgaum
Bachelor of Engineering
2014 - 2018

Skills Summary

Python Development 80%

GenAI & Data Science /AI, ML 80%

Tech Stack

- Python, AgenticAI, Langchain, Langraph, FastAPI, MongoDB, ScikitLLearn, TesnorFlow, RAGs, LLM PostgreSQL, MySQL, , Docker, CI/CD, REST APIs, MLFlow

- Python, Predictive Modelling, Customer Segmentation, Natural Language Processing, Time Series Forecasting, SQL, Snowflake, Power BI, Pandas, PowerBI, FastAPI, Git

- Python, FastAPI, Pyspark, MySQL, PostgreSQL, MongoDB, Apache Airflow, Kafka

Projects

Project: Intellifix API Platform
Client: OptivalueTek | Bengaluru, India (01/2022 – Current)
Role: Machine Learning Engineer

- Designed and implemented scalable LLM-powered APIs with FastAPI, leveraging OpenAI, LangChain, and LlamaIndex for RAG (Retrieval-Augmented Generation) workflows.
- Built AI microservices with Docker for model inference, embeddings, and retrieval orchestration.
- Integrated FAISS and Pinecone vector databases for semantic search and context-aware retrieval.
- Implemented JWT authentication and role-based access control (RBAC) for secure model API endpoints.
- Integrated OpenAI endpoints with MCP (Model Context Protocol) to enable dynamic function calling and multi-agent orchestration across real-world services.

Project: Edureka Data Platform
Client: Edureka | Bengaluru, India (01/2021 – 01/2022)
Role: Data Analyst (Python & SQL)

- Built modular Python APIs to serve Power BI dashboards and expose enterprise data.
- Designed and maintained Snowflake schemas, including partitioning, clustering, and materialized views.
- Developed ETL pipelines in Python (Pandas, NumPy) and automated workflows for data ingestion.
- Wrote complex SQL queries for joins, window functions, and aggregations, reducing runtime by 40%.
- Implemented caching strategies (Redis) to improve API response times for data queries.
- Created data quality validation scripts in Python, improving consistency across datasets.

Project: EbiSync Services
Client: Ebisu Technologies | Bengaluru, India (05/2019 – 03/2021)
Role: Python Developer

- Developed backend services and REST APIs using Django & Flask, deployed in production.
- Managed relational and NoSQL databases (MySQL, PostgreSQL, MongoDB) with optimized queries and indexes.
- Automated data pipelines using Apache Airflow for scheduling and orchestration.
- Integrated third-party APIs for data ingestion and external service synchronization.
- Implemented Celery-based task queues for background processing and async workflows.
- Handled real-time data streams using Kafka and Spark Streaming.
