CAREER OBJECTIVE

Dynamic derivatives trader with a proven track record in strategy development, algorithmic trading, and comprehensive market analysis. Proficient in fundamental and technical analysis, adept at macro and microeconomic assessment. Skilled in crafting risk management strategies to navigate complex financial landscapes. A results-oriented professional with a passion for optimizing trading performance through meticulous research and innovative approaches.

TRADING EXPERIENCE & SKILLS

- 3 years of trading experience in equity, future and options, forex, and currency.
- Deploying Fundamental and Technical Research to initiate trading positions.
- Strong knowledge of derivatives market and quantitative research.
- Trading actively in the Indian stock market both NSE & BSE in Equity, Future and Options.
- Building own trading strategies and taking position in real market with specified risk management.

EXPERIENCE

Mansukh Securities and Finance Ltd.

Derivatives Trader, February 2024 – Present

Index options trader focused on calendar spreads, diagonal spreads, and ratio spread structures, with emphasis on volatility, theta capture, and controlled Greek exposure.

- **Calendar & Diagonal Spread Trading and Ratio Spread Trading:**
  - Constructed trades based on IV term structure, IV percentile, and expected range
  - Entered positions when near-month IV is discounted relative to deferred IV
  - Maintained delta-neutral to mildly directional exposure at entry
  - Managed positions through option strike adjustments to control delta and vega

- **Exit criteria:**
  - Defined profit targets (theta capture) or limited-risk ratio structures
  - Time-based exit prior to high gamma risk
  - Volatility contraction
  - Continuous monitoring of delta and gamma, with hedging when required
- **Execution & Tools**
  - Trade execution and monitoring via NEST Algorithmic execution software.
  - Building rule-based and semi-automated strategies for systematic options trading

Sunrise Gilts and Securities Pvt. Ltd.

Derivatives Trader, August 2023 – January 2023

- Developed and implemented advanced options strategies including Straddles, Strangles, and Ratio Spreads, aligning trades with the fund's defined risk–return objectives.
  - **Entry Strategy:**
    - Identified trade opportunities using volatility analysis (IV rank/percentile), price action, previous day straddle premium and expected range projections.
    - Initiated positions based on volatility mispricing, breakout setups, or premium expansion/contraction scenarios.
    - Structured trades with predefined risk parameters and optimal strike selection to balance delta and theta exposure.
    - Position Management
    - Continuously monitored Option Greeks to maintain controlled exposure.
    - Adjusted positions through rolling, strike modification, or hedging to manage directional risk and volatility shifts.
    - Tracked mark-to-market P&L and conducted real-time risk assessment to maintain portfolio stability.
  - **Exit Strategy & Risk Control:**
    - Defined pre-determined profit targets based on premium decay or volatility normalization.
    - Implemented disciplined stop-loss levels to protect capital and manage adverse market moves.
    - Executed time-based exits to avoid excessive gamma risk near expiry.
    - Closed positions upon achieving risk-reward objectives or when original trade thesis invalidated.

- **Execution & Compliance:**
  - Executed trades efficiently using Greeksoftsoftware.
  - Conducted performance evaluation through P&L attribution and risk-adjusted return analysis.
